How to Use VOIS Assistant

Getting Started with VOIS

1. When started your laptop or pc, VOIS will have Wake Word Detection –
   Listens silently for "Hey VOIS". Say "Hey VOIS" to activate VOIS.
2. It will then authenticate your voice by asking you to say a phrase.
   - If you are a first-time user, access will be denied initially, and your
     voice will be recorded.
   - After recording, you will be asked to say the same phrase again. If it
     matches, access will be granted.
3. Next, VOIS will greet you with: "I am VOIS AI. How may I assist you?"

This is where your journey with VOIS begins.

Commands to Use VOIS Assistant
*(Note: You can say any command, but the specific keyword must be
included so that VOIS can recognize and execute it.)*
